

00-00 Installation Test

This example is a basic test to determine whether everything is set up so that the visual scheduling widget examples can be used without any problems.

The widget should be visible in the browser with its default settings. If this is the case, the examples provided can be used to explore the functionality of the Visual Scheduling Widget.

The following interactions are possible:

Change splitter position

- The splitter position can be moved interactively with the mouse to the left and right up to the respective stop.

Change visible time range

- The visible time range can be moved within the time scale by holding down the mouse button.
- You can click on the arrows to the left or right within the time scale.
- The horizontal scroll bar also allows you to change the visible time section.
- The image section can also be changed using the keyboard arrow keys on the left and right.

Change temporal resolution

- The level of detail of the time scale can be coarsened or refined using the mouse wheel. To do this, the mouse pointer must be within the time scale.
